EVERY BALL, ON THE BOX

LIVE · SIMULATE · PREDICT — IoT EXHIBITION 2026

WHAT IT IS

A battery-powered box that follows live IPL matches, plays new ones ball by ball, and works out who is likely to win after every delivery.

Everything runs on one **Arduino UNO Q**. No laptop, no cloud server: the board is the hub.

SCREEN 1 · LIVE

Scores from CricketData.org, checked every 150 s during a match and every 15 min otherwise, two calls short of the free plan's 100 a day. No IPL game on? It shows the next fixture.

SCREEN 2 · SIMULATE

Pick two IPL teams and the board bowls every ball itself: dot 33.5%, four 11%, six 5.2%, wicket 5%, bent by batter v bowler, the powerplay and the death overs.

EVERY BALL · PREDICT

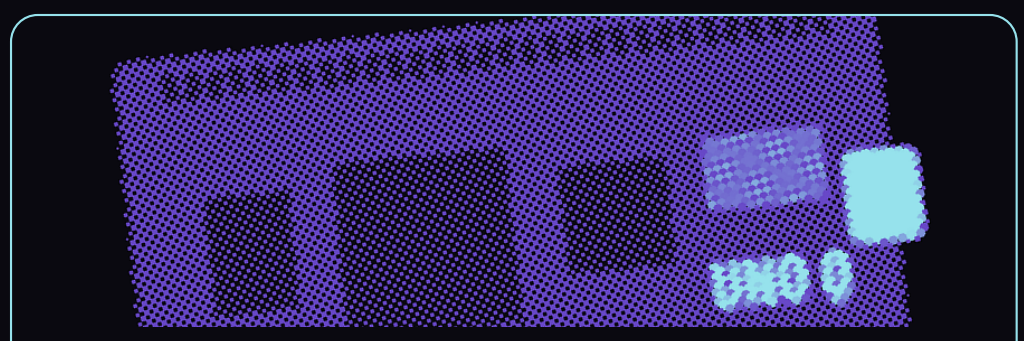

Runs still in reach with n balls and w wickets left, against the runs needed, gives a win chance held between 3% and 97%. Display and hub do the same maths.

240 BALLS · MI v CSK · 129/10 EACH · TIED

THE MATCH LIVES ON THE BOARD.

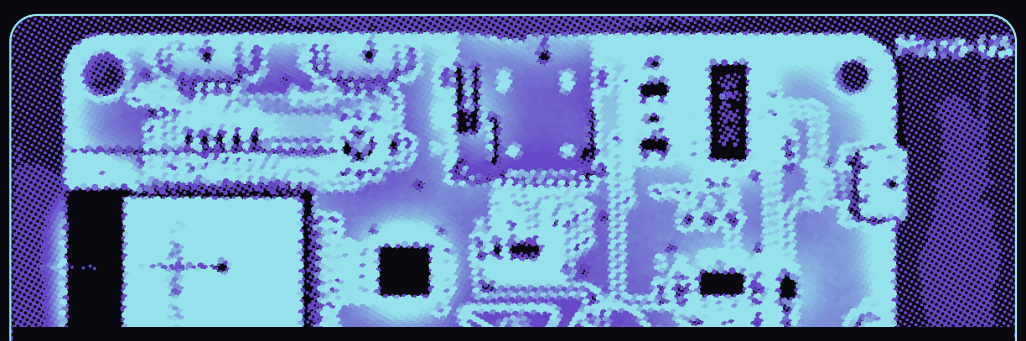

YUKI TAMANE

THE SCORER · UCIS MASCOT · KEEPS THE BOOK FOR EVERY BALL

ARDUINO UNO Q

QRB2210 Linux + STM32U585 · hub, simulator, hotspot

CHEAP YELLOW DISPLAY

ESP32 · 2.8in touch · tap to switch screens

Join Wi-Fi **UCIS-Cricket** and open **10.42.0.1:8000** for the dashboard. The board talks to the display over UART, 115200 baud.
